2026

1. OBJECTIVE

To bridge your knowledge from Database Systems to Object-Oriented Programming (OOP). You will understand how a database "Entity" (Table) translates into a Java "Class," and how data records translate into "Objects."

2. CONTEXT

In your previous semester, you designed an ERD (Entity Relationship Diagram) for a specific case study (e.g., Library System, E-Commerce, Academic Portal, etc.).

- In a Database, an entity is represented as a Table.
- In OOP, an entity is represented as a Class.

3. INSTRUCTION

- 1) Selected Entity: user and admin
- 2) Database Table Structure and mapping to java attributes

ADMIN

Database attributes	Java attributes	Data type
id	id	int
name	name	string/varchar
email	email	string/varchar
password	pass	string/varchar

USER

Database attributes	Java attributes	Data type
id	id	int
name	name	string/varchar
email	email	string/varchar
password	pass	string/varchar
pekerjaan	pekerjaan	string/varchar
usia	usia	int

4. IMPLEMENTATION

Data sample

```
assessment1 > DummyData.java ...
1 package assessment1;
2 import java.util.ArrayList;
3
4 public class DummyData {
5     public static ArrayList<User> users() {
6         ArrayList<User> userList = new ArrayList<>();
7
8         userList.add(new User(id: 1, name: "Deco", email: "deco@email.com", pass: "12345", pekerjaan: "manager", usia: 40));
9         userList.add(new User(id: 2, name: "Akbar", email: "akbar@email.com", pass: "12345", pekerjaan: "stakeholder", usia: 30));
10        userList.add(new User(id: 3, name: "Prasetya", email: "prasetya@email.com", pass: "12345", pekerjaan: "good person", usia: 20));
11
12        return userList;
13    }
14
15    public static ArrayList<Admin> admins() {
16        ArrayList<Admin> adminList = new ArrayList<>();
17
18        adminList.add(new Admin(id: 1, name: "Sherlock Holmes", email: "sherlock@email.com", pass: "12345"));
19        adminList.add(new Admin(id: 2, name: "Watson", email: "watson@email.com", pass: "12345"));
20
21        return adminList;
22    }
23 }
```

Account controller

```
assessment1 > Account.java ...
1 package assessment1;
2 public class Account {
3     protected int id;
4     protected String name;
5     protected String email;
6     protected String pass;
7
8     public Account(int id, String name, String email, String pass) {
9         this.id = id;
10        this.name = name;
11        this.email = email;
12        this.pass = pass;
13    }
14
15    public int getId() {
16        return id;
17    };
18
19    public String getName() {
20        return name;
21    };
22
23    public String getEmail() {
24        return email;
25    };
26
27    public String getPass() {
28        return pass;
29    };
30
31 }
32 }
```

Admin inherits from account

```
Admin.java X
assessment1 > Admin.java > Admin
1 package assessment1;
2 public class Admin extends Account {
3     public Admin (int id, String name, String email, String pass){
4         super(id, name, email, pass);
5     }
6 }
```

User inherits from account

```
User.java X
assessment1 > User.java > User
1 package assessment1;
2 public class User extends Account {
3     protected String pekerjaan;
4     protected int usia;
5
6     public User (int id, String name, String email, String pass, String pekerjaan, int usia){
7         super(id, name, email, pass);
8         this.pekerjaan = pekerjaan;
9         this.usia = usia;
10    }
11
12    public String getPekerjaan() {
13        return pekerjaan;
14    };
15
16    public int getUsia() {
17        return usia;
18    };
19 }
```

Auth controller

```
Auth.java X
assessment1 > Auth.java > Auth > login()
1 package assessment1;
2 import java.util.ArrayList;;
3
4 public class Auth {
5     enum Role {
6         ADMIN,
7         USER
8     }
9
10    String email;
11    String pass;
12    Role role;
13    ArrayList<User> users;
14    ArrayList<Admin> admins;
15
16
17
18
19    public Auth(String email, String pass, ArrayList<User> userList, ArrayList<Admin> adminList) {
20        this.email = email;
21        this.pass = pass;
22        this.users = userList;
23        this.admins = adminList;
24    };
25
26    public String getEmail() {
27        return email;
28    };
29}
```

```
public Role login(){
    for (Admin a : admins){
        if (a.getEmail().equals(email) && a.getPass().equals(pass)){
            return Role.ADMIN;
        }
    }

    for (User u : users){
        if(u.getEmail().equals(email) && u.getPass().equals(pass)){
            return Role.USER;
        }
    }
    return null;
};
```

Main file

The screenshot shows a Java code editor with a dark theme. The title bar says "Main.java 1, M X". The path "assessment1 > Main.java > Main > main(String[])" is displayed above the code area. The code itself is as follows:

```
1 package assessment1;
2 import java.util.Scanner;
3
4 public class Main {
    Run | Debug
5     public static void main(String[] args) {
6         Scanner sc = new Scanner(System.in);
7
8         boolean closed = false;
9         boolean loggedIn = false;
10
11        System.out.print(s: "\u033[H\u033[2J");
12        System.out.flush();
13
14        while (closed == false) {
15            System.out.println(x: "Welcome to 'Energy Bersih dan Terjangkau' ");
16            System.out.println(x: "please login first!");
17            System.out.println(x: "1. Login");
18            System.out.println(x: "2. Close");
19
20            String input = sc.nextLine();
21
22            switch (input) {
23                case "1":
24                    System.out.print(s: "\u033[H\u033[2J");
25                    System.out.flush();
26
27                    System.out.print(s: "Email: ");
28                    String email = sc.nextLine();
29
30                    System.out.print(s: "\u033[H\u033[2J");
31                    System.out.flush();
```

```
Main.java 1, M X
assessment1 > Main.java > Main > main(String[])
4  public class Main {
5      public static void main(String[] args) {
6
7          System.out.print(s: "Password: ");
8          String pass = sc.nextLine();
9
10         Auth auth = new Auth(email, pass, DummyData.users(), DummyData.admins());
11         Auth.Role role = auth.login();
12
13         if (role == Auth.Role.ADMIN) [
14             System.out.print(s: "\033[H\033[2J");
15             System.out.flush();
16
